## Cases - for transportation, presentation and utilisation

The cases by the company Shell Case, which have recently been included in our product range, offer the means to transport the installed electronic applications safely (in our enclosures) and to utilise them at the intended destination.

By including these accessories in our range of products, we want to gain new potential buyers and customers, as well as to test the willingness of existing customers to buy cases by OKW.

In order to keep internal costs as low as possible, the cases are not kept in our warehouse. Leadtime is 2 weeks.

The cases are available in 2 colours (grey and black) and in 4 different sizes (310, 320, 330, 340). As standard, the cases are delivered empty, that is, without any inserts whatsoever. For each case there are matching Velcro bags, foam inserts or a partition set and if required also a shoulder strap.

The foam inserts are designed so flexibly that the already perforated foam can be adapted individually to the device in question using a simple knife.

The partition set can be fixed reliably anywhere in the case by means of Velcro fastenings, allowing the interior to be designed individually.

## Product Technologies

Shell-Case uses its innovative multi-layer technology to join light and flexible materials together with heat in a thermoforming process to create a composite multi-layered material. The resulting material is light yet flexible, shock-absorbent, soft-to-the-touch and water-resistant case.
